

CO₂ EXPERIMENT

We have performed the experiment on Thursday, 1.10.2026 at 15:43 in BBG 1.78, sitting around the desk closer to the window. There were 5 of us sitting around the desk for the whole time of the measurement. The measurement lasted for 660 seconds.

After 6min +- 10s one of us blew at the sensor from a distance of 35cm +- 3cm. The constant (moderate) blow lasted for 10 seconds.

After analysing the data with the code `'plotting_code_CO2.py'` we got results, presented in Figure1.
